

Augusto Lemble

Full-Stack Developer

Tandil, Buenos Aires, Argentina

T: (+54) 92983-603659 E: me@augustolemble.com

Summary

I am a man who loves to learn and work with new and innovative technologies, In my work I prioritize technologies, environment and comfort over money. I am a person who learns from every experience, whether good or bad. I love working on Open-Source and Dapps.

Experience

Front End Developer on Ambisafe

05/2016 - Actually

Worked using ReactJS and React-native on Ethereum related projects.

<http://explorer.ambisafe.co/>

<http://explorer.chronicled.org/>

Ethereum Developer / Development Consultant on CrowdJury

03/2016 - Actually

Helping providing guidance on the development, design and deployment of smart-contracts over the Ethereum blockchain.

Full Stack Developer on incorporations.io

06/2015 - 02/2016

Build from zero a web platform that works with Node JS, ExpressJS, MongoDB and AngularJS. Here people and entities can find companies, manage their shares, members, documents, etc.

Founder/Project Owner/Manager on CryptUse (Cryptocurrency web platform).

04/2014 - 06/2015

Public and free web platform for people, commerces and foundations that use cryptocurrencies. It offers a service that helps in finding other cryptocurrencies users, trading with them and buying/selling products.

Development of trading bots for bitcoin and other cryptocurrencies.

02/2014 - 07/2014

I used java, selenium and testing to make trading bots that work using browsers to login in exchanges and sell or buy using basic trading algorithms.

QA Analyst at Devspark, Discovery Communications team.

06/2013 - 02/2014

Testing of the Discovery Communications Group websites and development of automatic testing tools using java, selenium and testing.

Education

Technician in Programming

2009 - 2013, Faculty of Exact Sciences, UNICEN.

Career that provides the student the tools and knowledge to develop and maintain software and web applications.

Course Fundamentals of Java and POO

2013, Scholarships Control F + and Oracle.

Advanced course that teaches the best ways to develop java applications using object oriented programming.

Skills

HTML, CSS3, Bootstrap 3 and JQuery

□□□□□□□□□□

Full-Stack Javascript (MongoDB, NodeJS, ExpressJS, AngularJS)

□□□□□□□□□□

Javascript & ES6 (ReactJs, NodeJS, Webpack)

□□□□□□□□□□

Ethereum

□□□□□□□□□□

Bitcoin Protocol and APIs

□□□□□□□□□□

PHP

□□□□□□□□□□

MYSQL

Java

□□□□□□□□□□

C++

□□□□□□□□□□

Android

□□□□□□□□□□

Selenium and TestNG.

□□□□□□□□□□

Python

□□□□□□□□□□

Other Skills

- Team Leadership.
- SCRUM.
- Git.
- Advanced use of linux systems.
- Entrepreneur Spirit
- Cloud services.

Projects

BKCVote - ReactJS + Webpack + Ethereum - Github:

<https://github.com/AugustoL/BKCVote> - *In Development*

Blockchain Vote Application is a web application to administrate, verify and vote on contracts over a public or private Ethereum network.

BKCBlog - ReactJS + Webpack + Ethereum - Github:

<https://github.com/AugustoL/BKCBlog> - *In Development*

First in history blog working over a blockchain, also my personal blog.

Solcompiler-js - Grunt + Javascript + Solc - Github:

<https://github.com/AugustoL/solcompiler-js> - *In Development*

Use grunt and node js to watch and compile contracts easily with simple commands.

OpenContent - NodeJs + AngularJS + Ethereum - Github:

<https://github.com/AugustoL/OpenContent> - *In Development*

OpenContent it's a decentralized social platform built over a custom Ethereum blockchain.

EthereumJS - NodeJs + ExpressJS + MongoDB + AngularJS + Ethereum -

Github: <https://github.com/AugustoL/ethereumjs>

An app built using the MEAN stack to use and manage contracts and scripts on your own ethereum testnet.

BTC-Payments - NodeJs + ExpressJS + MongoDB + AngularJS + Bitcore + Blockr API - Published on <https://www.npmjs.com/package/btc-payments>

An NPM module to easily configure and integrate a BTC payments processor into nodejs, using a hierarchical deterministic addresses you will receive all your payments on a single address. You will also not need the bitcoin blockchain to push text, so it's very lightweight and you can use the testnet network for testing.

Just a logger - NodeJs - Published on

<https://www.npmjs.com/package/just-a-logger>

An NPM module that allows you to print custom output messages.

Cryptpuse - NodeJs + ExpressJS + MongoDB + AngularJS + Bitcore + Blockr API - *Suspended*

CryptUse is a public and free web platform for people, commerces and foundations that use Bitcoin and other cryptocurrencies.

Cryptsy Bender - Java + Cryptsy API - *Finished* [BitcoinTalk Forum](#)

A BTC trading bot that uses simple trading algorithms and works over the exchange cryptsy.com.

MCXNow BOT - Java + MCXNow API - *Finished* [BitcoinTalk Forum](#)

A BTC trading bot that uses simple trading algorithms and works over the exchange [mcxnow.com](#).

Languages

- Spanish (Native).
- English (Fluent), FIRST Certificate of Cambridge International University.
